HEALTH INFORMATICS TRAINER

Objective

Dedicated and tech-savvy Health Informatics professional with a background in EHR systems, clinical workflows, and user training. Skilled in designing and delivering engaging training materials that improve adoption and system proficiency. Seeking the Health Informatics Trainer role at Niagara Health to help staff confidently and effectively utilize Hospital Information Systems to improve patient care and operational efficiency.

Highlights of Qualification

Healthcare IT: Arya EHR, EpicCare (training exposure), HL7, FHIR, PHIPA

Programming: Python, R, SQL, Ruby on Rails, Tableau, JavaScript, TypeScript, React.js, Node.js.

Databases & Cloud: MySQL, PostgreSQL, MongoDB, SQLite, AWS, Firebase, S3, Azure

Other Tools: Git, GitHub, VS Code, Agile/Scrum practices

Tools: Microsoft 365, GitHub, SharePoint, Agile/Scrum

Education

Health Informatics (Postgraduate)

May 2025 – April 2026

George Brown College, Toronto, ON – Ontario College Graduate Certificate

- Analyzed >5,000 health records using R and Python to identify workflow inefficiencies.
- Completed projects integrating Arya/Epic EHR data with decision support prototypes.
- Studied data governance, interoperability (HL7/FHIR), and clinical workflow design.
- Gained training in data governance, privacy, and interoperability standards.
- Applied data management, interoperability (HL7/FHIR), and system integration principles.
- Completed projects on clinical decision support, Epic workflows, and health IT.

Information Technology (Certificate)

October 2025

York University, Toronto, ON – IEP Bridging Program

- Learned Java programming and object-oriented design.
- Built web and console apps using Java and SQL.
- Built and maintained Java applications, focusing on data handling, front-end, and back-end development.
- Applied database programming skills (SQL) and cloud concepts for coursework and practical projects.

Volunteer Experience

Technology & Data Support Intern
LetsStopAids, Toronto, ON, Canada

November 2024 – Current

- Provide technical support for data systems and digital health platforms, ensuring data integrity and system reliability.
- Perform data validation and troubleshooting across tools and APIs to maintain accurate health data.
- Assist with deployment and testing of digital applications, ensuring cross-platform functionality.
- Collaborate with IT and program teams to optimize workflows and support analytics initiatives.
- Document technical issues, resolutions, and best practices in system knowledge base.

Professional Experience

Service Porter/Front Desk,
BMW Toronto, Toronto, ON, Canada

Feb 2025 – Current

- Managed client interactions, ensuring accuracy and efficiency in service workflows.
- Processed and tracked customer data, maintaining confidentiality and attention to detail.
- Safeguard customer keys and personal items by securely storing them in designated areas.
- Communicate with clients, providing timely updates and addressing concerns as needed.
- Tag vehicles with ID and print service history reports to ensure accurate tracking and transparency.

Projects

Clinical Decision Support Prototype – Designed and tested a CDSS to reduce surgical cancellations by analyzing pre-op requirements; prepared SOPs and presented findings to faculty stakeholders.

Cardiology Wait Times Analysis – Conducted an environmental scan of Ontario cardiology access issues; summarized research and co-presented recommendations in a 10-minute group presentation.

Health Workforce Data Analysis – Used **R and Python** to perform statistical analysis and visualize health workforce data; validated datasets and documented workflows for reporting.

Professional Development and Certifications

- IBM Data Analyst Professional Certificate – July 2025
- Certified AWS Cloud Practitioner – August 2023
- Agility with Scrum Fundamentals, ICAgile – May, 2024
- IIBA® Member – Oct 2025
